The Environmental Protection Agency is expected to release a report Wednesday afternoon about radioactive material near the Bridgeton landfill.

Residents have been complaining about the smell coming from the landfill, but the biggest fear is that the smoldering creating that smell at the base of the landfill will reach the radioactive material stored at the West Lake Landfill.

The results that will be released at 2 p.m. are from an aerial survey conducted on March 8. They conducted low-level fly-byes to find out if any surface level radiation is located near the landfills.

The results will be released as many of the residents have started moving out of the their homes while workers dig in to relieve some of the landfill's smell. The work will make the smell worse before it gets better.
